Product and review-capacity options

Buyer Review Pack is one fixed, record-only product family. Qualified buyers choose capacity after Fit Check. Capacity packs are one-time volume purchases for separate eligible buyer reviews.

Capacity packs are not subscriptions or faster-processing tiers.

- Buyer Review Pack — one separate eligible buyer review — US\$5,950
- Two-Review Pipeline Pack — two separate eligible buyer reviews — US\$10,950
- Three-Review Pipeline Pack — three separate eligible buyer reviews — US\$15,950
- Five-Review Pipeline Pack — five separate eligible buyer reviews — US\$24,950

Each review slot covers one buyer organization, one buyer request, one supported Buyer Review Profile, up to 75 buyer requirements, up to 40 source files, and up to 100 MB of source material per processing run. Purchased capacity is available for 30 calendar days.

Included for each eligible review

- Buyer requirement coverage matrix
- Source-linked response statements where authorized records support them
- Evidence binder index with source names, access modes, and SHA-256 hashes
- Authorized downloadable evidence in the ZIP; view-only evidence referenced without redistributing raw bytes

- Gap and customer-confirmation report
- Buyer forwarding note
- Canonical manifest, signed receipt, checksums, and verification instructions
- Up to two same-request re-runs during the 30-day order window

A successful new request consumes one review slot. A failed generation does not consume a slot. Re-running the same request uses its included re-run allowance rather than another review slot. Every separate request receives its own package identifier, manifest, receipt, checksums, buyer due date, and evidence set.

Payment

Card payment activates the order after Stripe confirms a completed successful payment. Invoice payment, with optional PO/reference, activates after cleared payment. Applicable taxes are shown or collected where configured and required.

Security, evidence handling, and retention

The browser-based workflow does not require system access, agents, integrations, or credentials. Customer source records for this direct-buyer workflow are hosted in Google Cloud's Montréal region. Source uploads are deleted within 24 hours after terminal processing. Generated packages and order access remain available during the 30-day order window. Buyer questionnaires, README files, upload instructions, and Fit Check files are not treated as evidence. Payment and invoice processing are handled by Stripe.

Boundaries

AttestLayer does not provide audits, certifications, legal advice, compliance approvals, penetration testing, custom integrations, human questionnaire completion, system access, unsupported claims, or buyer-acceptance guarantees. The customer reviews and decides what to send.
